SUMMARY

Full-stack developer with 2+ years of production experience across 3 companies, building systems that solve real business problems: cross-border payment flows, AI-powered product search, live video streaming for enterprise surveillance, and real-time billing engines.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C#

Frontend: Angular, React, Next.js, Astro, Tailwind CSS

Backend: NestJS, Node.js, FastAPI, REST APIs, Socket.IO, SignalR, BullMQ

Databases: PostgreSQL, MongoDB, Redis, Prisma, TypeORM

AI & Realtime: OpenAI Realtime API, LangChain, RAG, Qdrant, FAISS, WebRTC

Tools: Git, Docker, Nginx, PM2, FFmpeg, Stripe

PROFESSIONAL EXPERIENCE

Full Stack Developer | HS Technologies

Mar 2025 – Present

- Replaced keyword-based product search with vector semantic search (Qdrant) so users find products even with vague or misspelled queries, making product discovery work for a cross-border shopping platform where customers search in different languages.
- Built a real-time session billing engine for live doctor consultations so charges are calculated and settled automatically per session, removing the need for manual invoicing entirely.
- Built the live video streaming module for VXS, an enterprise vehicle surveillance platform on a 33-module NestJS backend, giving operators uninterrupted camera feeds with automatic reconnection. Also contributed to the number plate recognition (ANPR) pipeline and real-time alarm system.

Angular Developer | Texel Technologies

Sep 2024 – Apr 2025

- Built the frontend of a real-time SignalR chat module that lets team members view multiple Facebook pages and chat with each page's users through Facebook webhooks, keeping conversations in sync without page refreshes. Also built a Medical CRM dashboard that gave clinic managers one clear view of patient data instead of digging through raw tables.

Web Developer Intern | Wordsense 2.0

Jun 2024 – Sep 2024

- Within a 3-month internship, delivered UI components and API integrations for a .NET and Angular content platform that went live in production.

PROJECTS

KitKiat Studio – Music & Books Platform (Freelance) | kitkiatstudio.com

- Migrated a music label off Wix onto a platform they own: built a public Astro SSR site, a React admin CMS with drag-and-drop content editing, and a NestJS + PostgreSQL backend with Stripe checkout and live stock sync, so the client updates everything without a developer.

Volvox – AI Research Assistant (RAG) | [Live Demo](#)

- Built Volvox, an AI research assistant where users upload documents or paste YouTube links and chat with an AI that answers questions grounded in that content, with citations. Uses LangChain and FAISS for retrieval, Gemini for generation, a FastAPI backend, and a Next.js PWA.

CallDraft – AI Voice Agent | [GitHub](#)

- Built CallDraft to enable live AI voice conversations directly in the browser with under 800 ms latency. Uses OpenAI Realtime API over WebRTC so there is no audio upload delay.

EDUCATION

BS Computer Science | University of Engineering and Technology, Lahore

Expected 2027

CGPA: 3.33 / 4.00
